CombiBloc
Close-coupled centrifugal pumps
CombiBloc

CombiBloc is the premier solution for pumping clean thin liquids in a very cost-effective way. The pump is part of Johnson Pump’s Combi-system, a modular programme of single stage centrifugal pumps with a high degree of interchangeability of parts between the different pump constructions.

CombiBloc represents a range of horizontal centrifugal pumps close-coupled to electric motors. The pump is suitable for handling low-viscosity, clean or slightly contaminated and aggressive liquids.

Characteristic of the CombiBloc is the compact configuration of the pump and the electric motor assembly. The use of a stub shaft allows standard IEC electric motors to be used.

Thanks to the small number of components and the use of a mechanical seal, the CombiBloc requires little maintenance. This is further supported by Back Pull Out of the rotating assembly.

The CombiBloc has applications in crop farming and market gardening, on board ships and in handling various chemicals.

Test bed Johnson Pump in Assen
From know-how to finding solutions

General industry
The CombiBloc can be applied as a general duty pump in many industrial applications. Because of its economic features and ease of construction this pump is also ideally suited for space saving OEM skid mounting.

Shipbuilding
CombiBloc pumps can handle both clean and slightly contaminated fresh water and sea water. Their compact, space saving build makes them ideal pumps for engine rooms and general duty.

Utility
Applications of the CombiBloc within utility buildings are as general duty pumps, circulation pumps in heating and air-conditioning systems and pumps in water purification plants.

Horticulture
In horticulture the CombiBloc is used as a transport pump for hot water heating systems.
Features and benefits

**Pump casing**
- flanges according to ISO 7005
- max. working pressure 10 bar
- drain opening
- wide range of applications
- complete and fast draining of the casing

**Pump cover**
- flat gasket, fully chambered
- machined fits
- no gasket blow-out
- perfectly aligned

**Suction capabilities**
- smooth suction entry in pump casing
- smooth surface
- anti rotation vane
- optimum suction capabilities
- minimal flow distortion giving better suction capabilities

**Impeller locking**
- impeller nut with spring washer
- reliable locking

**Hydraulic balancing**
- flat cover for hydraulic balancing
- back vanes for hydraulic balancing
- extended bearing life time

**Foot**
- machined foot
- exact positioning on base and in pipework

**Coupling guard**
- consisting of 2 identical parts with snap fit
- aluminium
- quick and easy mounting
- for increased safety
- non sparking

**Materials**
- pump casing: cast iron - bronze - stainless steel
- impeller: cast iron - bronze - stainless steel
- stub shaft: stainless steel
**Easy and low cost maintenance**
- pump cover and lantern piece mounted to pump casing as one unit, no separate bolting
- quick and easy impeller replacement
- only 3 mechanical seal sizes
- changeable wear ring (only bearing bracket 2 and 3)
- easy to disassemble pump cover
- economic maintenance
- extended pump life time

**Lantern piece**
- rigid cast iron construction
- machined fits
- large openings
- exact alignment
- easy access for inspection and service

**Electric motor**
- standard IEC size flange motor
- fixed bearings
- larger pump sizes mounted with foot-flange motor
- independance of motor make
- economic
- reliable
- readily available

**Seal chamber**
- seal chamber integrated in pump cover
- large and tapered shape
- internal seal flushing bore to seal chamber
- perfect alignment resulting in increased seal life
- better drainage of seal chamber
- ample seal flushing
- no external flushing piping needed

**Shaft sealing**
- mechanical bellows seal according to EN 12756 (DIN 24960 L1k)
- several material combinations
- no O-ring lock up
- interchangeable with other EN (DIN) seal makes
- suitable for many liquids

**Stub shaft**
- stainless steel AISI 316
- fits to IEC electric motors
- axial fixation with set screws
- 3 shaft diameters
- no shaft sleeve needed
- easy impeller replacement
- adjustable axial impeller position
- low maintenance cost
Hydraulic performance data

These curves are based upon nominal electric motor speeds. The actual pump performance curves may vary from these curves, depending on the actual electric motor speed.

- $n_{\text{nom}} = 1000 \text{ rpm}$ (6 pole motor - 50 Hz)
- $n_{\text{nom}} = 1200 \text{ rpm}$ (6 pole motor - 60 Hz)
- $n_{\text{nom}} = 1500 \text{ rpm}$ (4 pole motor - 50 Hz)
- $n_{\text{nom}} = 1800 \text{ rpm}$ (4 pole motor - 60 Hz)
- $n_{\text{nom}} = 3000 \text{ rpm}$ (2 pole motor - 50 Hz)
- $n_{\text{nom}} = 3600 \text{ rpm}$ (2 pole motor - 60 Hz)
**Dimensions**

**ISO 7005 PN 16**

**CombiBloc**
